Documentation: PostgreSQL_blob_usage.py

The function inserts a NumPy image array as a blob into a PostgreSQL database.

The function accepts the following parameters:

- **image_array** (NumPy array): The image array to be inserted as a blob into the database.
 - **db_connection** (str): The connection string for the PostgreSQL database.
 - **table_name** (str): The name of the table in the database where the blob will be inserted.
 - **column_name** (str): The name of the column in the table where the blob will be stored.
-

The function provides the following output:

- Upon successful insertion of the image blob into the database, it prints the message: **"Image blob inserted successfully!"**
- If any error occurs during the insertion process, it prints the corresponding error message.
